

THANKS FOR DOWNLOADING AND IF YOU WANT TO YOU CAN DONATE AT paypal [speedy\\_69@hotmail.com](mailto:speedy_69@hotmail.com)  
BECAUSE THIS TOOK A LOT OF MY TIME AND IT WILL DETERMINE IF I SHARE MORE WITH YOU ABOUT THIS AND  
CONTINUE TO DEDICATE ANY TIME TOWARDS THIS IN THE FUTURE ALSO I WOULD GREATLY APPRECIATE IT...  
OK LETS GET STARTED...

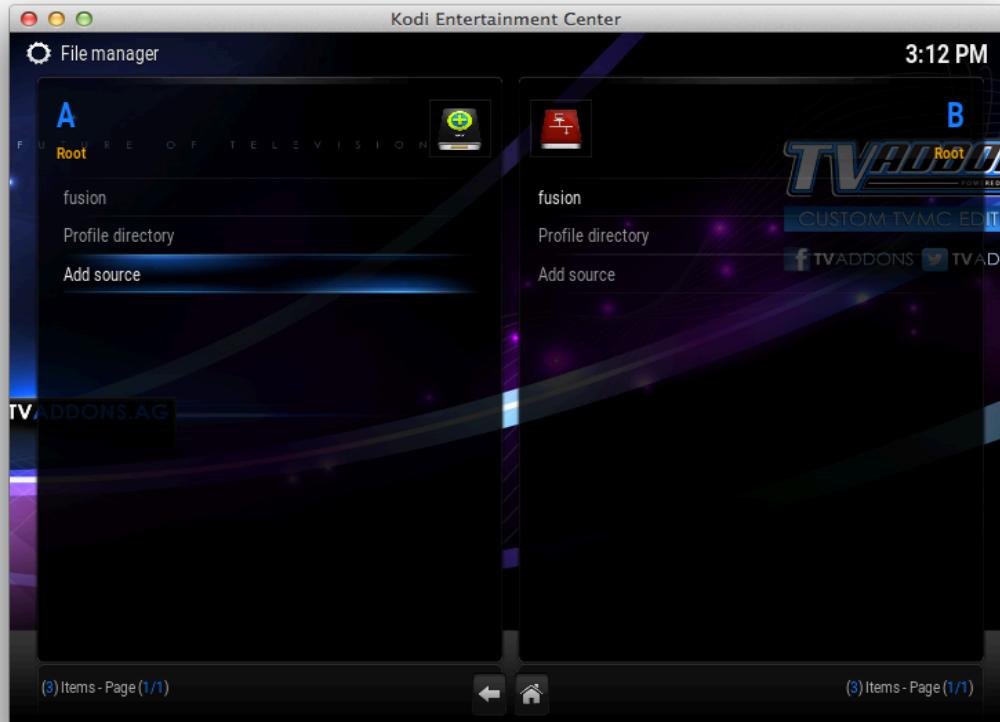

1. You should have just downloaded the UNZIPONDESKTOP.zip, and have it opened that's how you are reading this readme file. **DO NOT UNZIP ANYTHING ELSE LOCATED IN THESE FOLDERS.** (If you are just updating the superfavourites go to #21). Lets double check that you have it on the desktop as this will be easiest for the tutorial and will make it easier to update in the future as nothing will change but the "SUPER FAVOURITES x.xx.xx.zip" (x.xx.xx=date of update). Which should be located when you unzip it at.

"Desktop/UNZIPTODESKTOP/Superfavouritesimported/Super Favourites 8.13.15.zip."

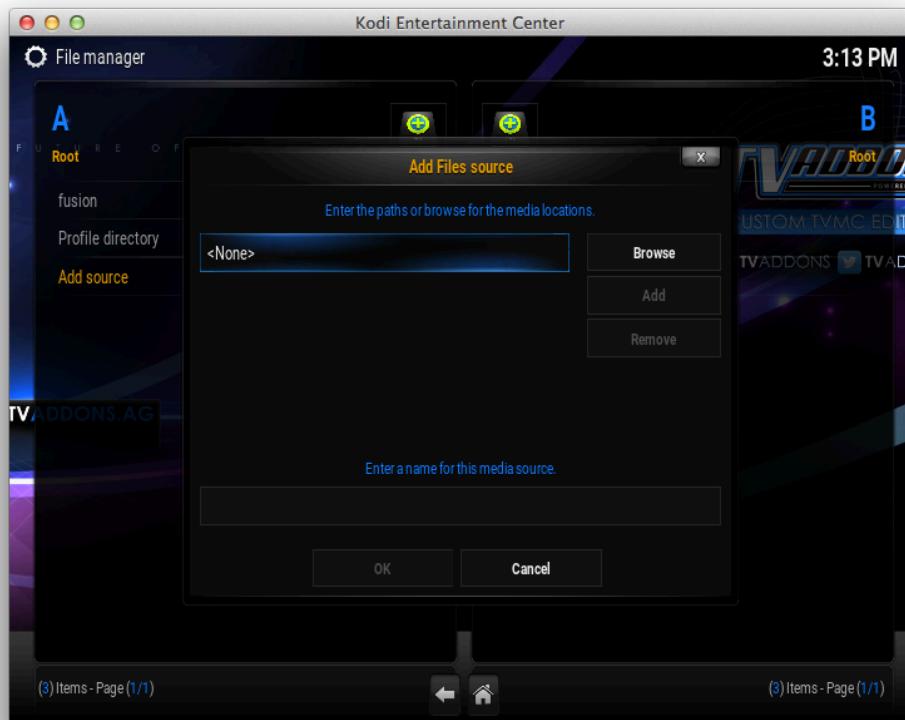

2. Lets open Kodi and navigate to SETTINGS>FILE MANAGER

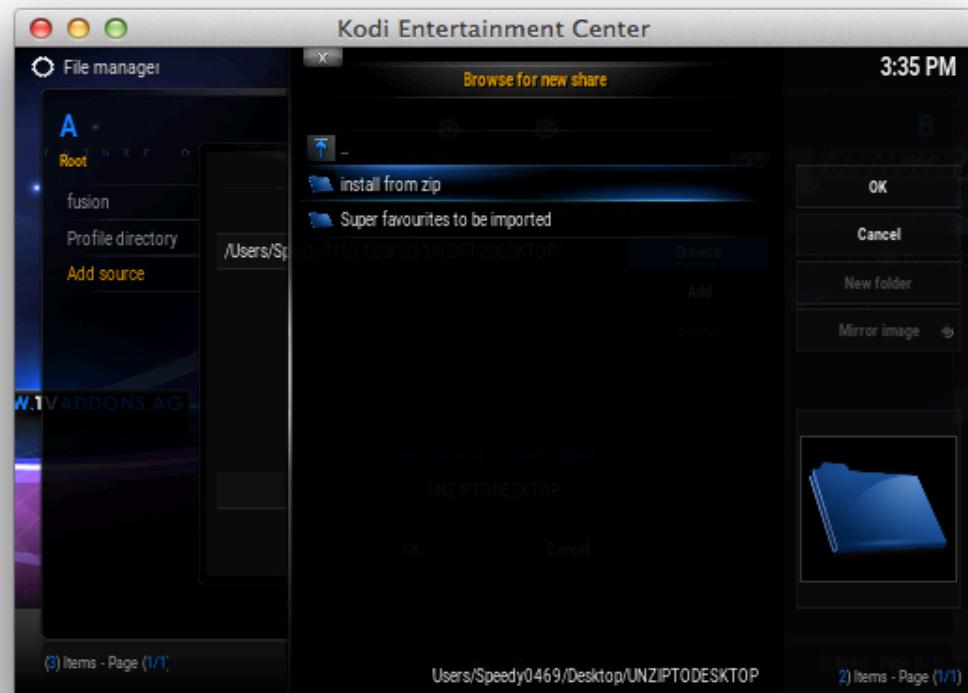

3.Your screen might be a little different depending on what you have in here (my screenshot is a fresh newly installed copy of Kodi so I don't have many repositories or actual files.) Click Add Source

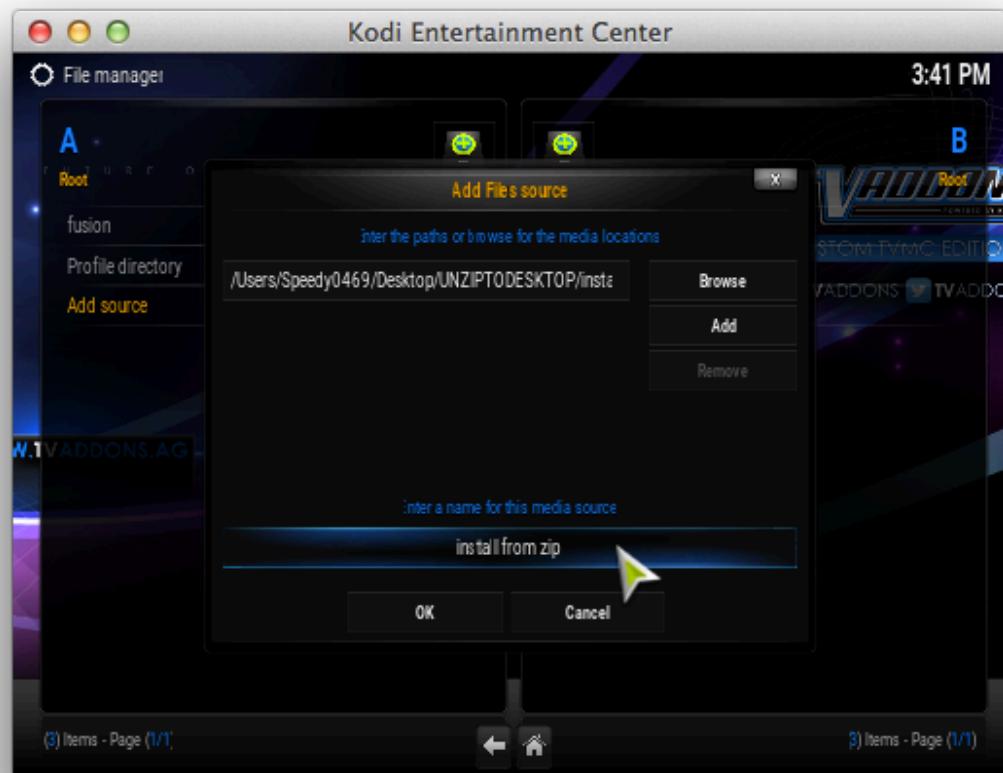

4. You should be on this screen. Lets click Browse and navigate to where you downloaded the UNZIPTODESKTOP.zip Its very important you have the UNZIPTODESKTOP somewhere on the actual device you are running it on. (this tutorial was made on a mac so you can see the information on the bottom of each screen. Which should be located /YOUR USERNAME/Desktop/UNZIPTODESKTOP)

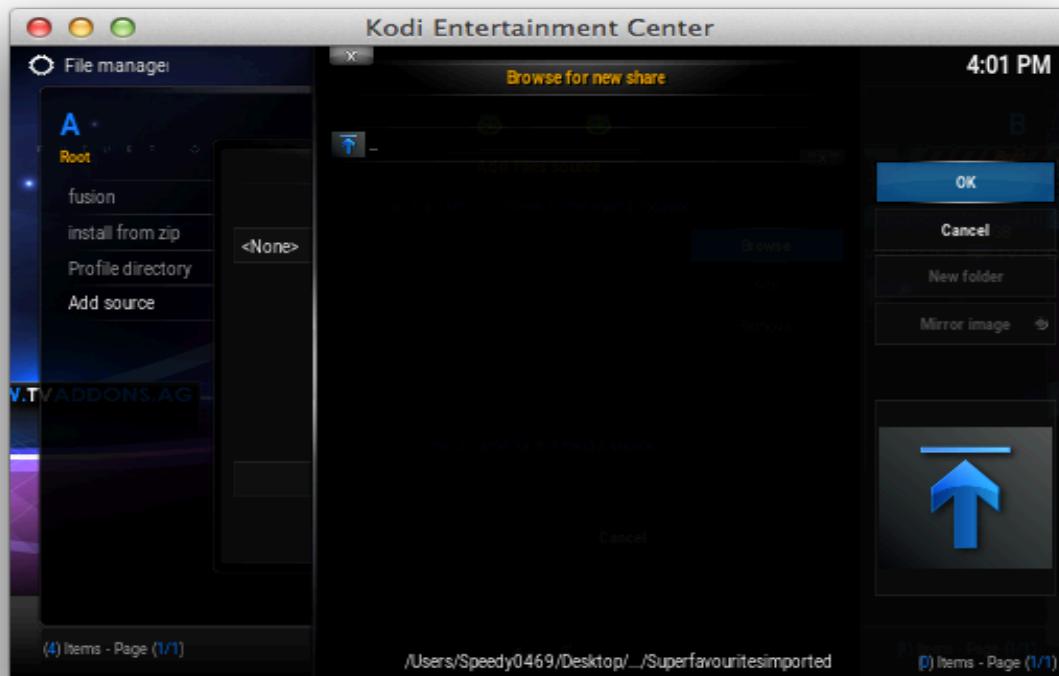

5. This part is **IMPORTANT** and needs to be completed so the programs know where to look for the apps and the lists. Lets click install from zip then click ok off to the right side.

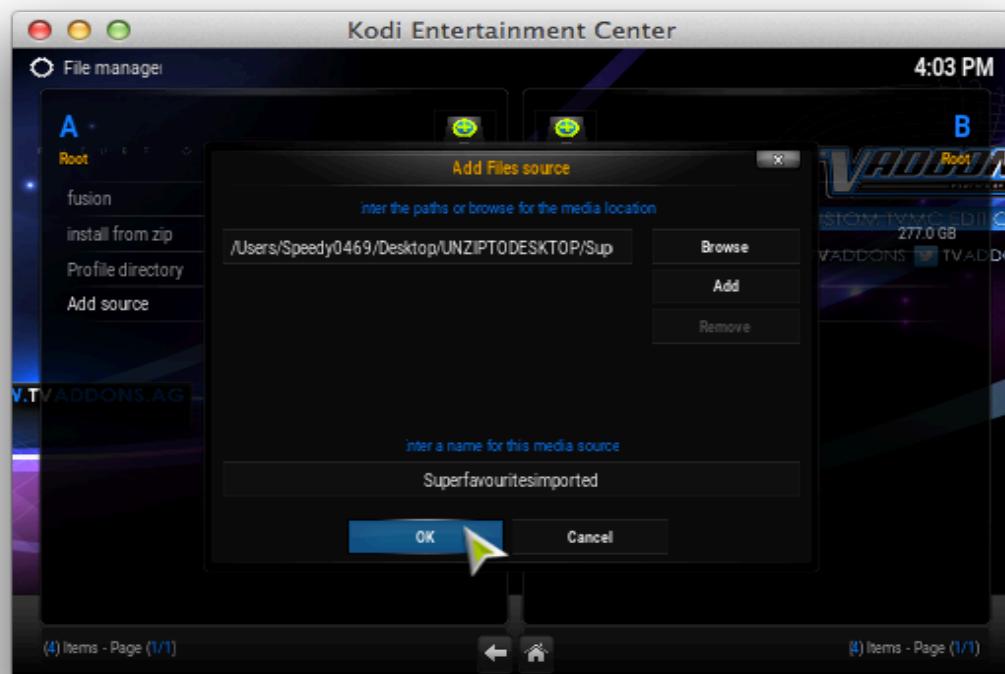

6. By default it names it "Install from zip" which is good click OK (**MAKE SURE YOU CLICK OK**)

7. You should now have one of the two Sources you need here. Lets add the other. **SUPER IMPORTANT.**  
Navigate to the same folder, this time we will click “Superfavouritesimported” so it opens it up then click ok off to the right side (note nothing will be visible inside the folder like in the photo below which is ok, there is actually files in there).

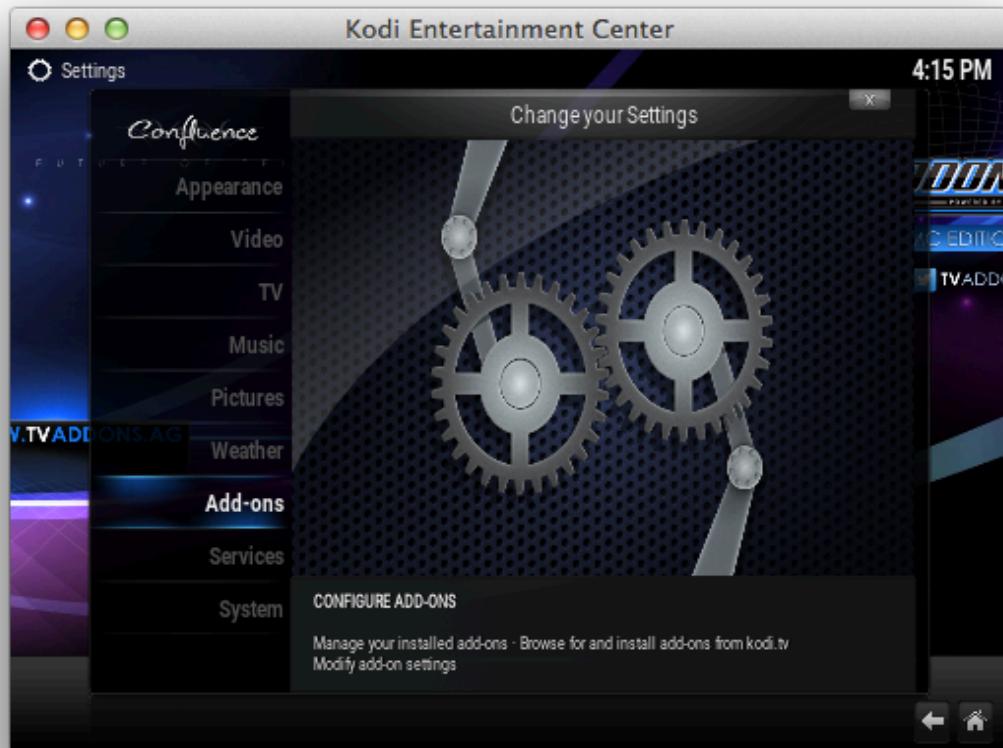

8. Here again by default it will name it for you this time “Superfavouritesimported” click ok

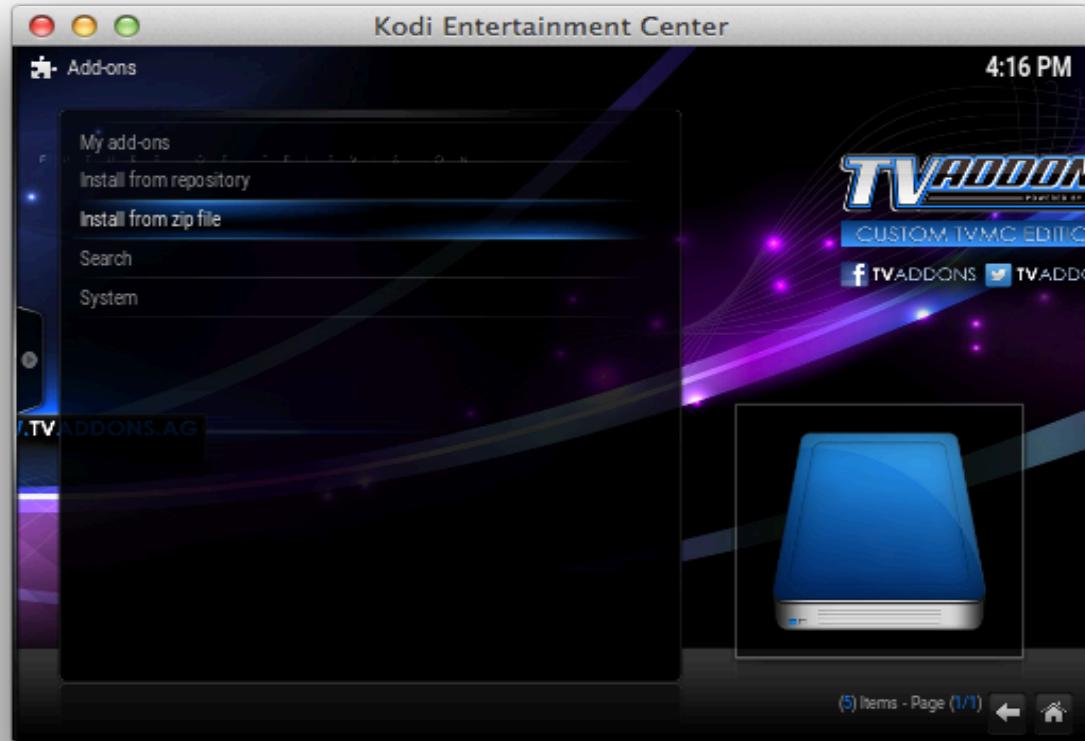

9. Hopefully you did everything correctly and you should have this screen. Minus the two RED arrows.

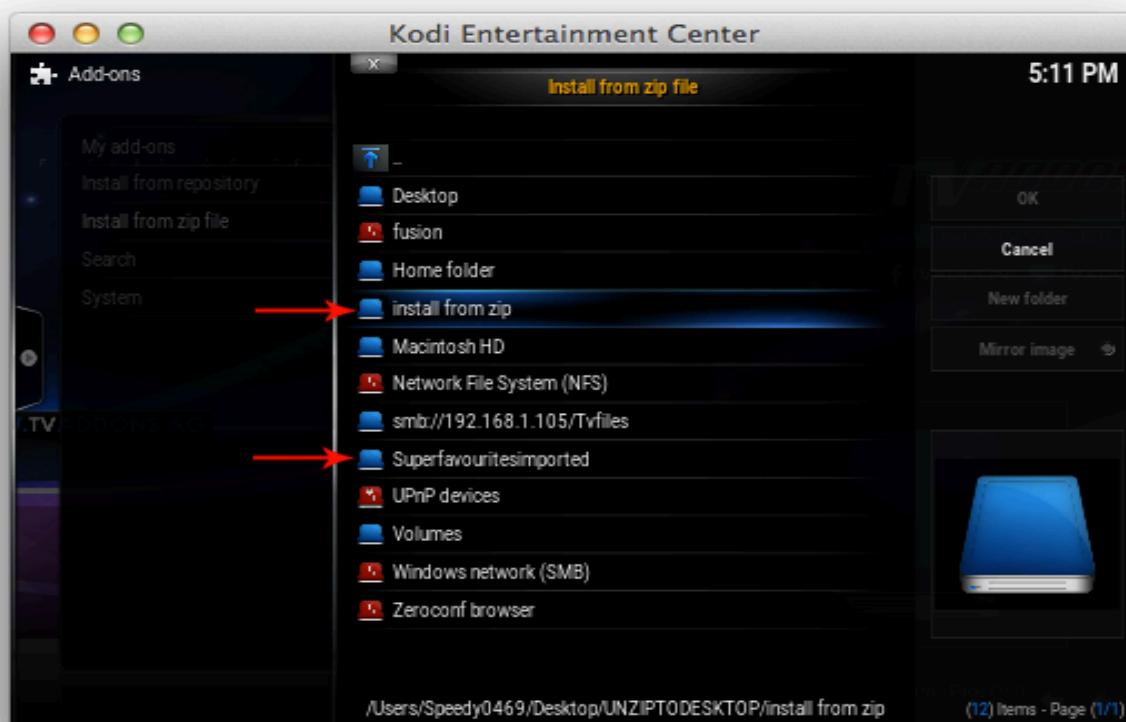

10. Now we're going to install the repositories/plugins/script files which are located in the "Install from zip" Source you just added. Lets Navigate there now. Hit the Esc till you go back to the main screen.  
"HOMESCREEN>SYSTEM>SETTINGS>ADD-ONS>INSTALL FROM ZIP."

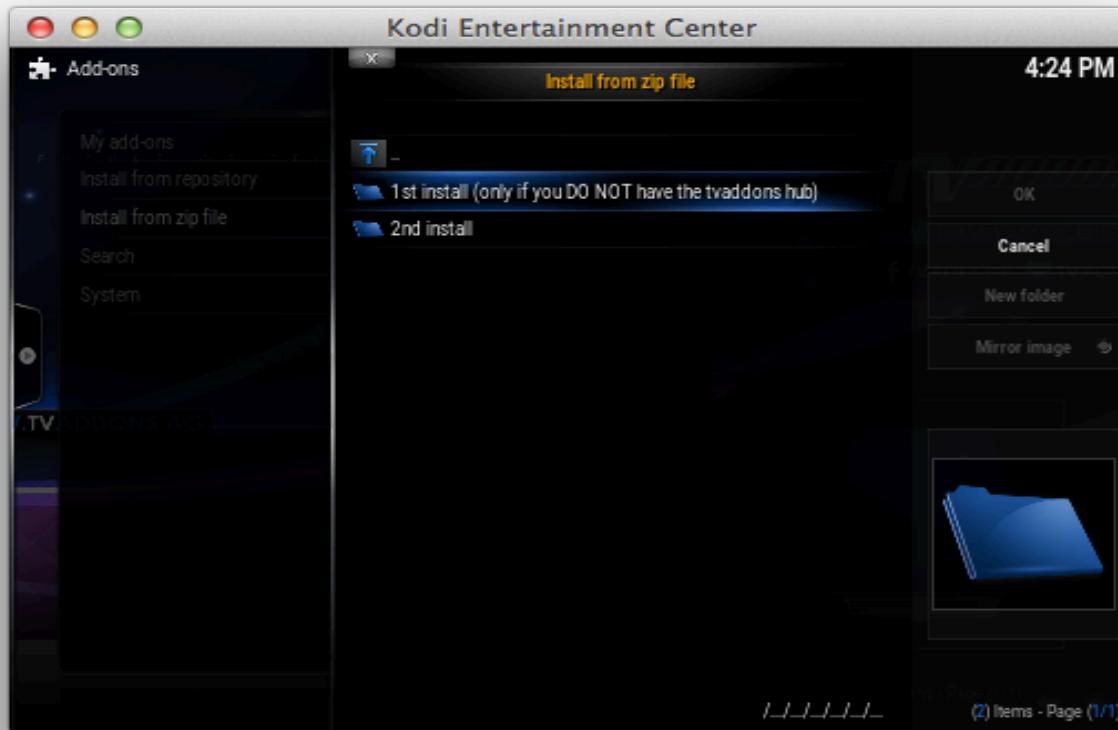

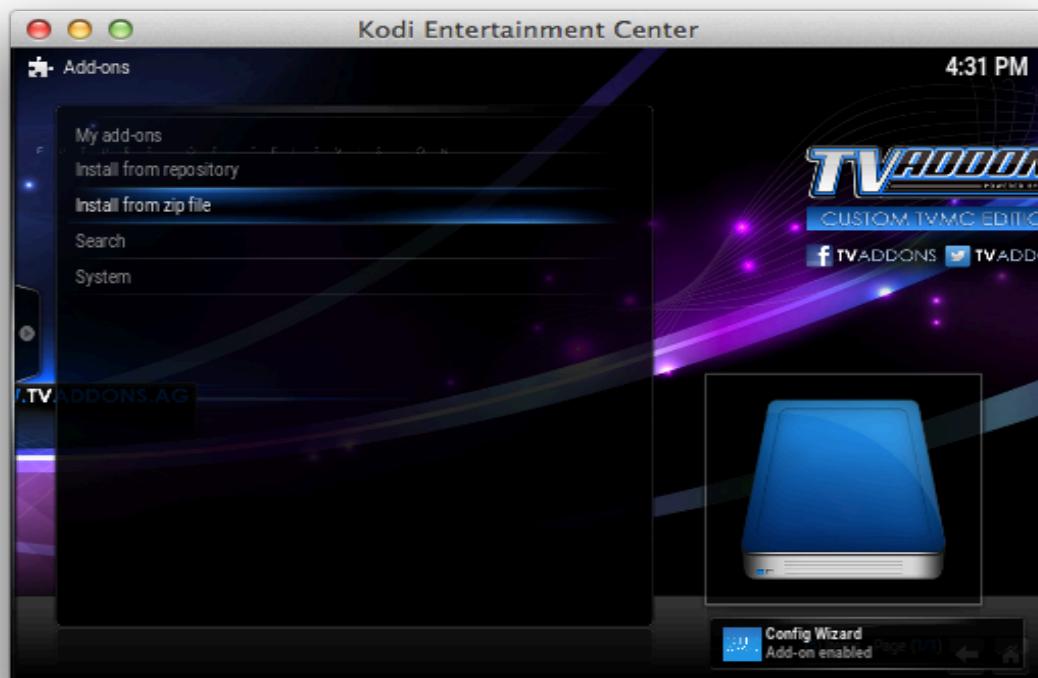

11. Here you will notice a lot of folders (they will all be different on whatever device you're running kodi on). You should have at least the two Sources you added earlier during steps #4-8 lets go into “install from zip”

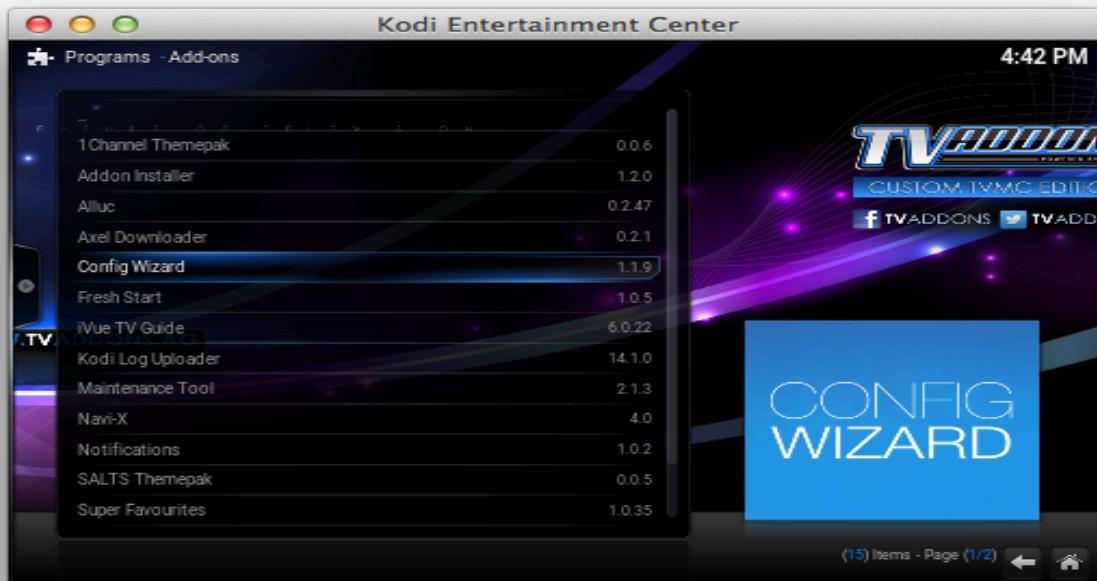

12. Notice the two folders, They made it so you just hit ENTER or CLICK on the “.zip” file and it installs. To you who don't have all the “tvaddons hub installed” lets start with 1<sup>st</sup> install (**if you DO have the “tvaddonshub” installed proceed to # 16**) Lets open the 1<sup>st</sup> install to get started with the install.

13. Ok So we've went into 1<sup>st</sup> install folder and clicked on the “plugin.video.hubwizard-1.1.9.zip” and it installed you will notice the little banner on the lower right hand confirming it has been installed or enabled depending on what you installed.

14. Now we will go into the “Config Wizard” to complete the setup of the “plugin.video.hubwizard-1.1.9.zip”. Go to HOMESCREEN>PROGRAMS(it should take you there automatically but if not PROGRAMS>Add-ons)”Config Wizard”

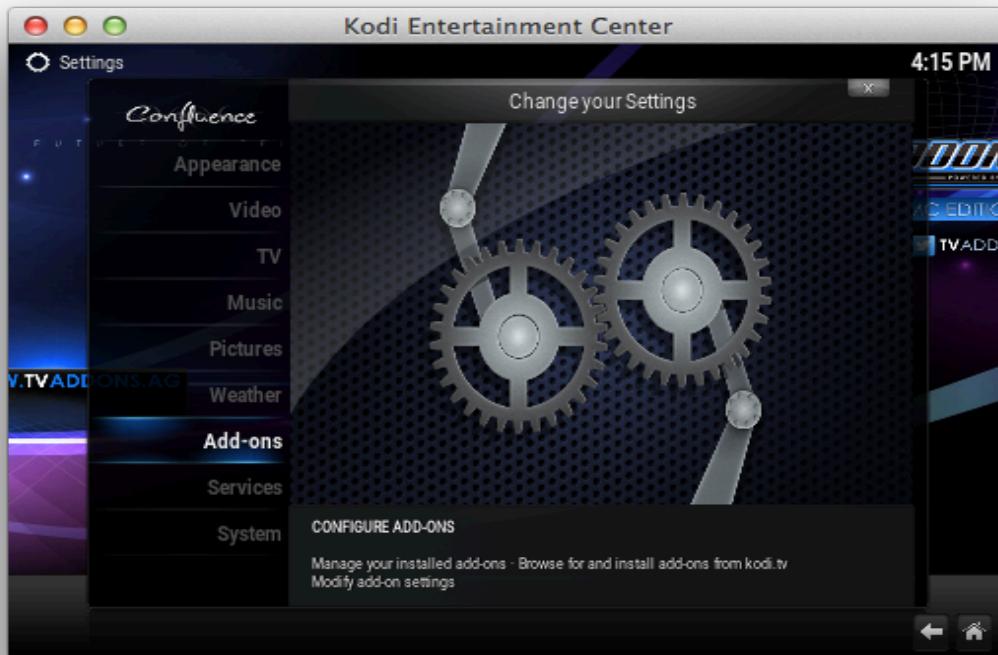

15. You should see this screen where you can confirm by whichever you are installing it on to. This will take a little bit for it to complete. Once it does complete close KODI and reopen it.

16. OK. So you should have “**tvaddonshub**” installed and ready to add the other plugins. First lets go check to make sure the “**tvaddonshub**” install didn’t remove your Sources you had entered on steps 2-9. Navigate to SETTINGS>FILE MANAGER. If the Sources aren’t there please go back and redo steps 2-9.

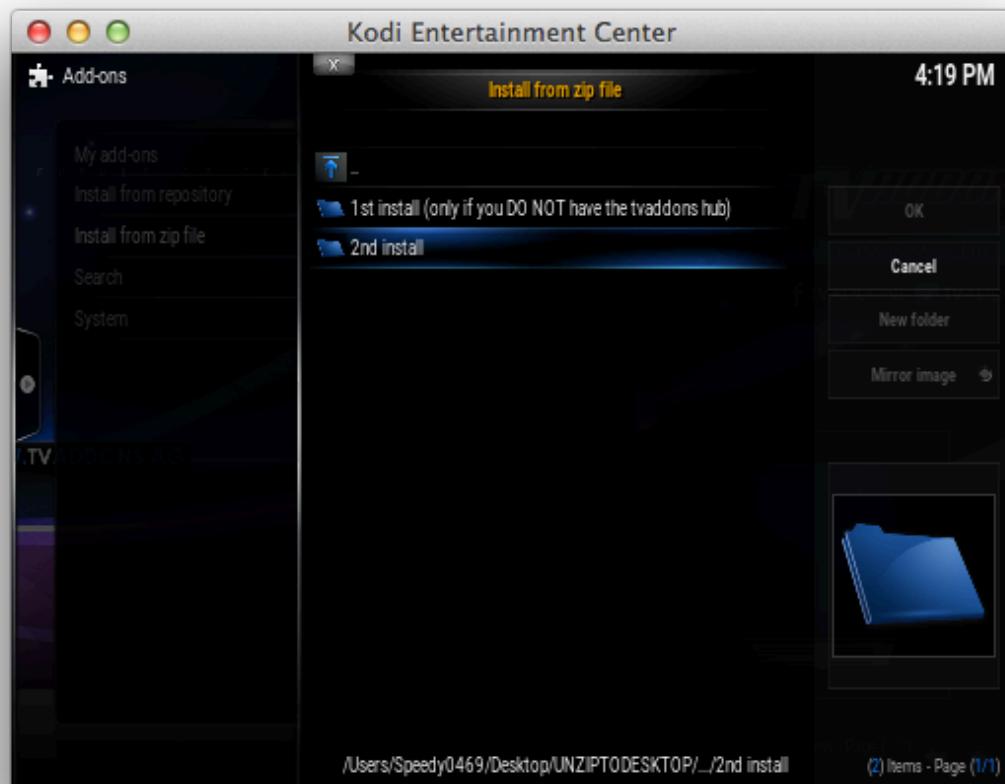

17. Now were going to install the repositories/plugins/script files which are located in the “Install from zip”. Lets navigate there now. Hit Esc till you go back to the main screen. “HOMESCREEN>SYSTEM>SETTINGS>ADD-ONS>INSTALL FROM ZIP”

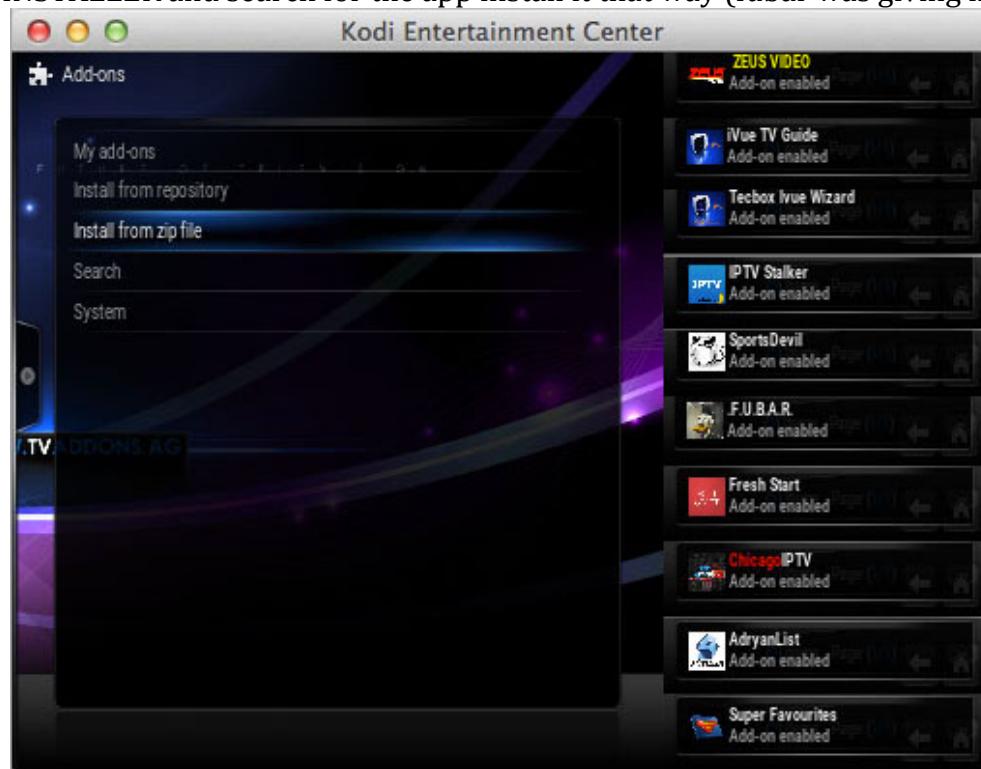

18. Notice the two folders, They made it so you just hit ENTER or CLICK on the ".zip" file and it installs. Lets go with 2nd install this time.

19. Notice all the plugin.zips we are going to install all of these so go ahead and click each one wait for the banner to pop up on the lower right hand corner for each one and go back into it and install the next till you complete all of them.

20. Here you can see each of the installs went through (photo has been edited to show each banner) yours will be one banner at a time and wait till it pops up if you get any errors just re open it. (if it still doesn't open go to PROGRAMS>ADDON INSTALLER and search for the app install it that way (fubar was giving me troubles)).

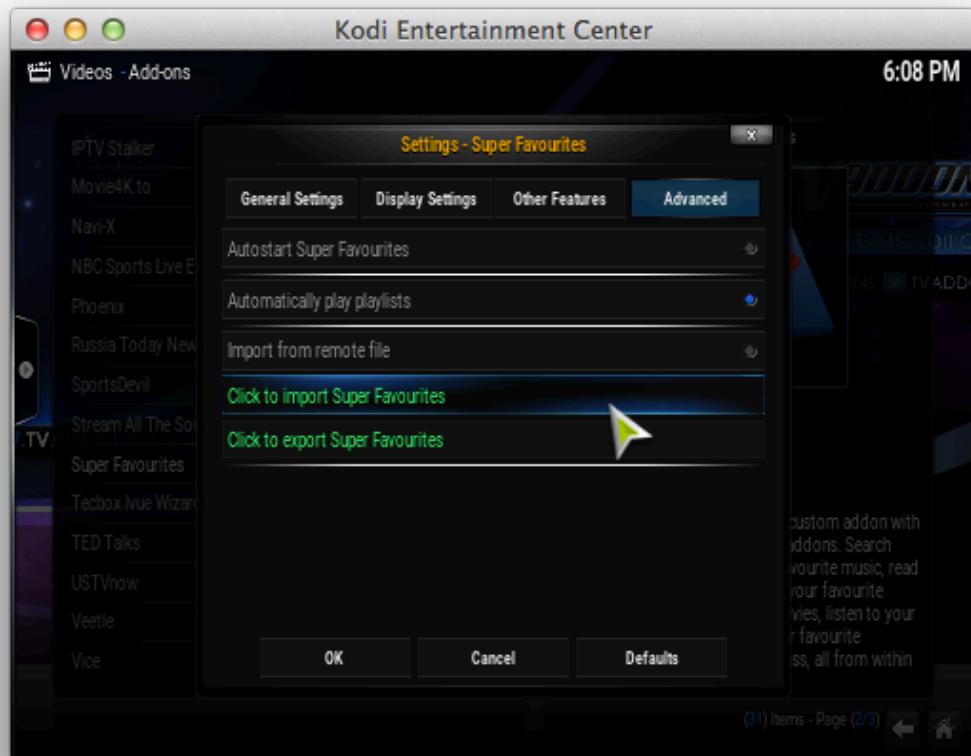

21. Here you are going to update the superfavourites app. To do this you will need to navigate to VIDEO>ADD-ON

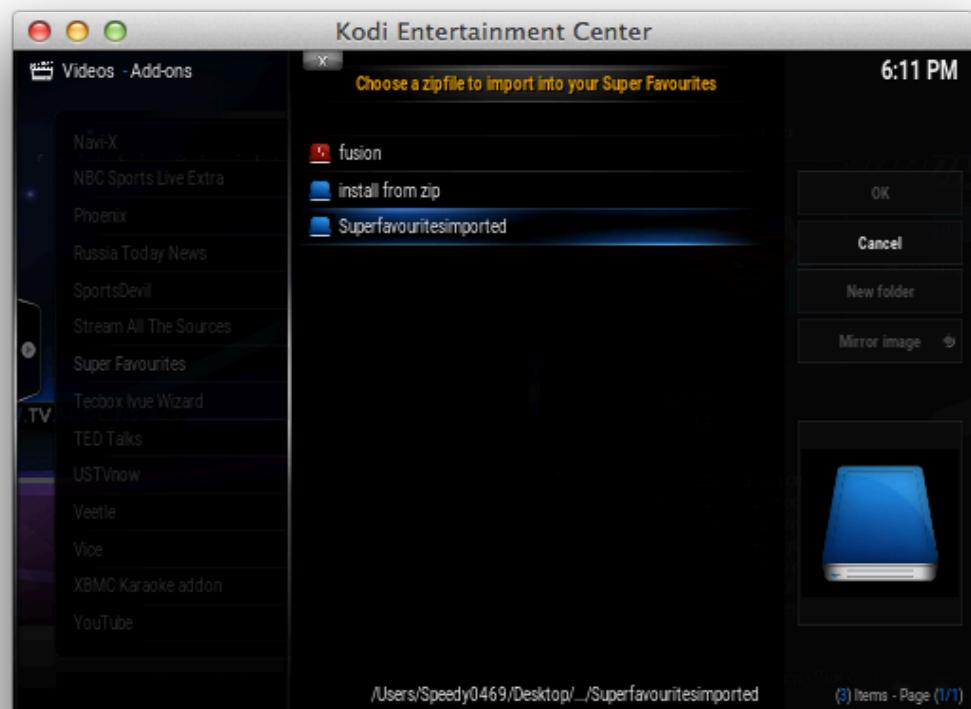

22. Highlight Super Favourites and (pullup drop down menu "C" or Right Click)

23. Here you will go over to "Advance Tab" and go down where it says Click to import Super Favourites.

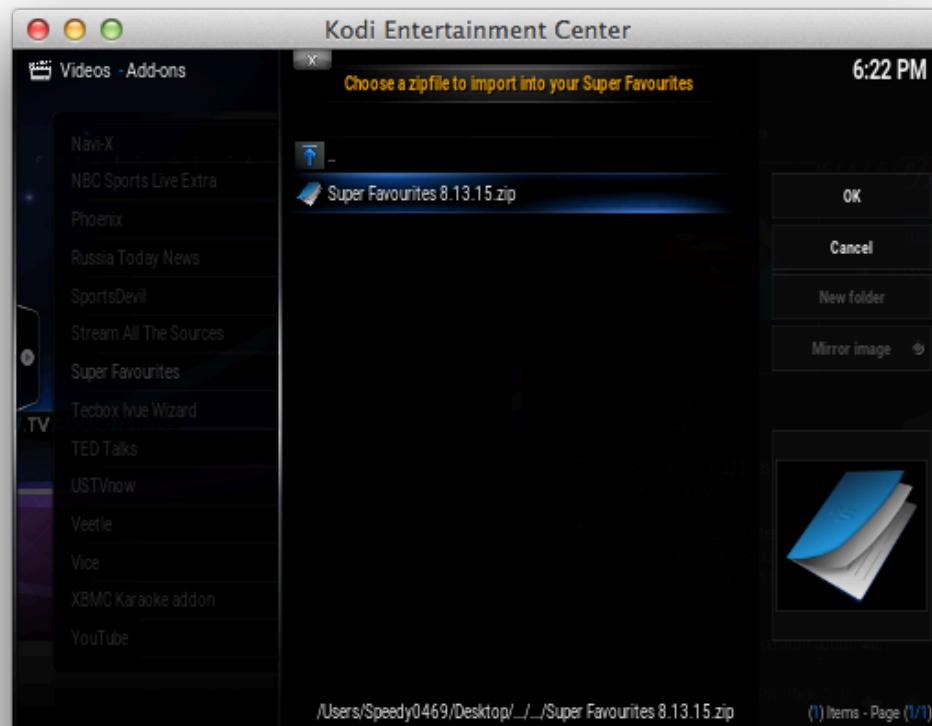

24. Here Depending on how many sources/repos you have added in the past you will have more but you will at least have the two we added on steps #4-8. Click the Superfavouritesimported folder.

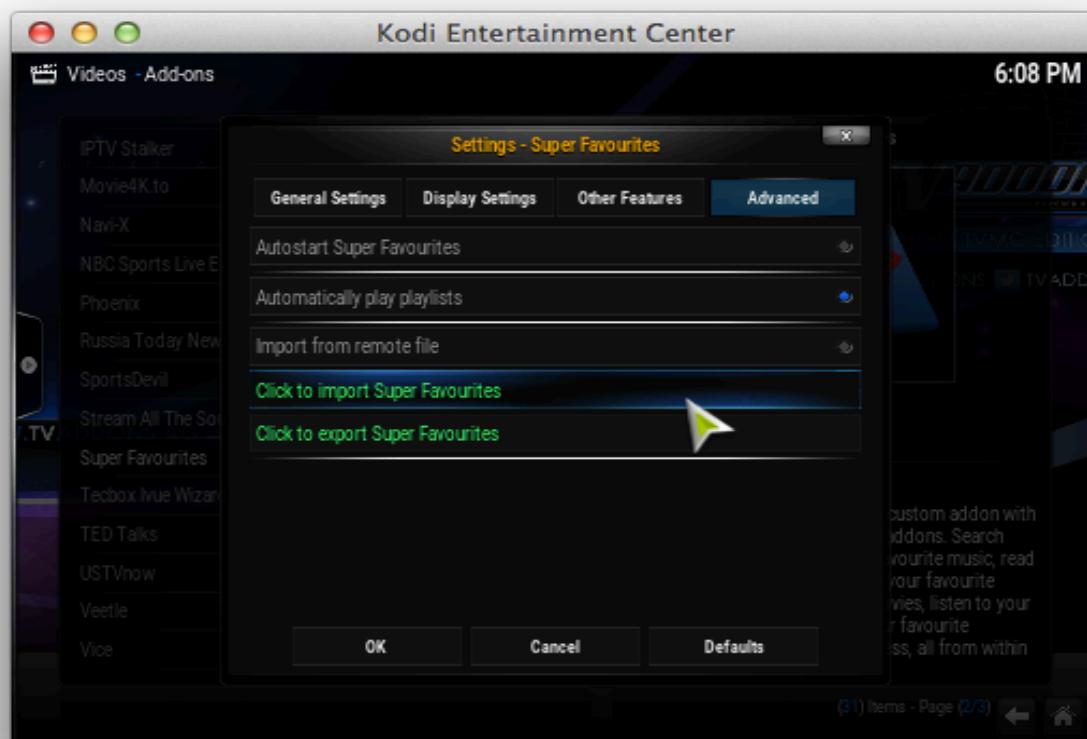

25. Here you will notice the “Super Favourites 8.13.15.zip” (Superfavourites x.xx.xx=date/version) this will change with updates to come. This **Will ALWAYS BE LOCATED IN THE SAME DIRECTORY**.

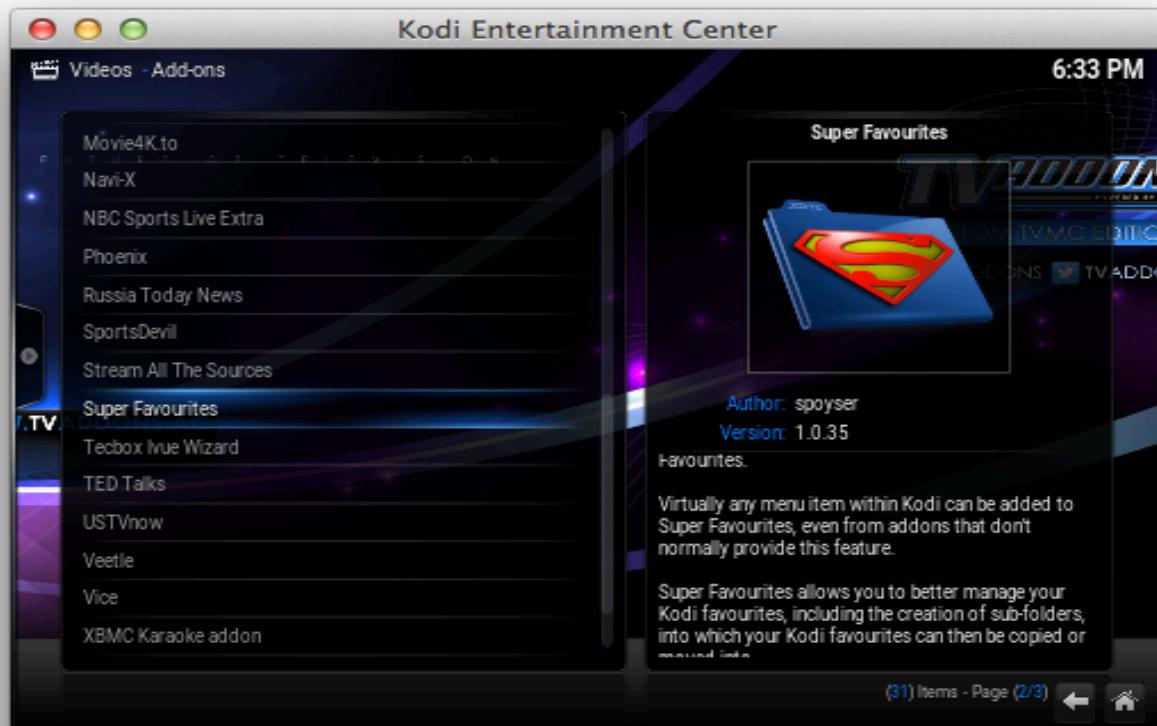

“User/Desktop/UNZIPTODESKTOP/Superfavouritesimported”

26. Click the Ok down at the bottom

27. Open the “Super Favourites”, located in “VIDEO>ADD-ONS”.

28. Here you should see this screen open it up and you should see the two options “Live Tv” And “Video on Demand” which means we are finished so ENJOY.....
